Summary

Aspiring Data Analyst with hands-on experience in Python, SQL, Excel, and Power BI, focused on exploratory data analysis (EDA), data cleaning, and dashboard development. Built end-to-end analytics solutions across credit risk, retail, and supply chain domains, combining SQL querying, predictive modeling, and business reporting on large real-world datasets to turn raw data into actionable, decision-ready insights.

Projects

Credit Risk Assessment System | *EDA & Predictive Analytics*

Python, SQL, XGBoost, SHAP, Flask, PostgreSQL, Pandas, Power BI

- Performed EDA on 255K+ loan applications using 22+ engineered features to uncover key drivers of loan default risk.
- Developed a predictive model achieving ~70% default recall (ROC-AUC: 0.76), with SHAP used to explain individual risk predictions.
- Built an analytics application using Flask, PostgreSQL, and Power BI to automate loan evaluation, reporting, and risk analysis.

Shoplytics AI | *Retail Data Analytics & Business Intelligence Platform*

Python, SQL, Pandas, NumPy, Flask, PostgreSQL, Power BI

- Conducted EDA on 17K+ retail transactions to identify sales trends, customer purchasing behavior, and profitability insights.
- Performed data cleaning, validation, and feature engineering to prepare transaction data for reliable analysis.
- Built a Power BI dashboard covering sales, profitability, customer behavior, and logistics for business reporting.

Supply Chain Performance Analytics | *Business Intelligence & Predictive Analytics*

Python, SQL, PostgreSQL, Power BI, Pandas, Scikit-learn

- Analyzed 172,765 global e-commerce orders using SQL to identify logistics bottlenecks and profitability opportunities.
- Built interactive Power BI dashboards to communicate order, shipping, and profitability trends to stakeholders.
- Developed a predictive model (75% accuracy, 84% precision, 70% recall) for shipment delay prediction using Scikit-learn.

Virtual Experience

Deloitte Australia – Data Analytics Job Simulation (Forage)

June 2026

Tableau — Excel — Data Analysis

- Built interactive Tableau dashboards to analyze manufacturing machine downtime and operational performance.
- Applied Excel-based business rules to classify employee equality metrics and derive HR insights.
- Delivered data-driven recommendations through visualization and business analysis techniques.

Skills

Languages: Python, SQL

Data Analysis: Excel, Pandas, NumPy, Exploratory Data Analysis (EDA), Data Cleaning, Data Validation, Statistics

Visualization: Power BI, Tableau, Matplotlib, Seaborn, Dashboard Development

Database & Tools: PostgreSQL, Git, GitHub

Soft Skills: Analytical Thinking, Problem Solving, Communication, Team Collaboration, Adaptability

Education

Vidyalankar Institute of Technology, Wadala

2024 – 2028

B.Tech in Computer Engineering — CGPA: 9.12/10
