

SOHAM NITIN PASHILKAR

Data Analyst | SQL | Power BI | Python

+91 8419943679 · [My Portfolio](#) · sohampashilkar84@gmail.com · linkedin.com/in/soham-pashilkar · github.com/sohamnp06

Summary

Aspiring Data Analyst with hands-on experience in SQL, Excel, Python, and Power BI/Tableau, gained through end-to-end analytics projects spanning data cleaning, EDA, statistical modeling, and dashboard development. Skilled at translating raw datasets into clear KPIs and data-driven narratives for business decision-making, with strong analytical thinking, attention to detail, and communication.

Education

Vidyalankar Institute of Technology

B.Tech in Computer Engineering · CGPA: 9.12/10

Expected May 2028

Mumbai, India

Experience & Training

Deloitte Australia Data Analytics Job Simulation

Forage Virtual Experience Program

June 2026

Remote

- Analyzed manufacturing operations data using statistical and exploratory techniques to identify machine-downtime patterns and pinpoint the factories and equipment contributing most to production disruption.
- Built an interactive Tableau dashboard to track factory- and machine-level KPIs, applied Excel validation rules to classify workforce equality data, and documented insights for HR and business review.

Projects

Supply Chain Performance Analytics | *Python, SQL, Scikit-learn, Power BI*

May 2026 – Jul 2026

- Collected, cleaned, and queried **172,765 global e-commerce orders** to identify the regions, shipping methods, and operational factors driving delivery delays.
- Applied statistical analysis and built a shipment-delay prediction model with **84% precision** and **75% accuracy** to flag orders at elevated risk of late delivery.
- Created a Power BI logistics dashboard with KPI tracking for delayed-order rate, shipping time, regional profitability, sales performance, and fulfillment efficiency.

Shoplytics – Retail Sales Analytics | *Python, SQL, Power BI, Excel*

Jan 2026 – Apr 2026

- Collected, cleaned, and standardized **17K+ retail transactions** using Python and SQL to uncover revenue trends, seasonal demand, customer behavior, and profitability drivers.
- Performed statistical comparisons of sales, order frequency, profit margin, and customer spending patterns to identify high-value categories, repeat-purchase segments, and underperforming products.
- Built an interactive Power BI dashboard with calculated measures, slicers, and drill-down views to track KPIs for revenue, profitability, order volume, customer behavior, and category performance.

Credit Risk Assessment System | *Python, SQL, Scikit-learn, SHAP, Power BI*

Oct 2025 – Dec 2025

- Analyzed **255K+ loan applications** and engineered **22+ borrower and financial features** to surface the strongest statistical drivers of credit-default risk.
- Trained and evaluated a credit-risk classification model with a **0.76 ROC-AUC**, enabling more reliable identification of high-risk applicants.
- Used SHAP to explain model predictions and built Power BI dashboards with KPI tracking for applicant risk segments, approval patterns, and portfolio exposure to communicate insights to non-technical stakeholders.

Technical Skills

Business Intelligence & Reporting: Power BI, Tableau, Excel, Dashboard Development, KPI Tracking, Data Storytelling

Programming & Databases: Python, SQL, PostgreSQL

Libraries: Pandas, NumPy, Scikit-learn, SHAP, Matplotlib, Seaborn

Analytics & Statistics: Data Cleaning, EDA, Statistical Analysis, Feature Engineering, Predictive Modeling, Model Evaluation

Tools: Git, GitHub, Jupyter Notebook

Core Strengths: Analytical Thinking, Problem-Solving, Attention to Detail, Communication, Documentation

Achievements

Secured **2nd Runner-Up** at the **TCS Technology Day 2026 AI Hackathon** for developing a RAG-based Interview Intelligence System with semantic search and contextual document retrieval.
